

3 **ABSTRACT OF THE DISCLOSURE**
4

5 A pneumatic gun alignment system for accurately adjusting a gun position. The
6 pneumatic gun alignment system includes a support bag having an air bag positionable
7 beneath a firearm, and an air supply fluidly connected to the air bag for supplying
8 pressurized air to the air bag. A valve unit is preferably positioned within the hose for
9 allowing the user to slowly release air from the air bag and for maintaining a desired
10 amount of air within the air bag. The user increases the air pressure to elevate the
11 firearm and decreases the air pressure to lower the firearm.
